

J.D. COLLEGE OF ENGINEERING & MANAGEMENT

PRESENTATION

ON

**I/O PERFORMANCE IMPROVEMENT: SPOOLING,
BUFFERING & CACHING**

SUBJECT : COMPUTER ARCHITECTURE AND ORGANIZATION

COURSE CODE : MC1A005

GUIDED BY : PROF. RUTUJA GAUTAM

PRESENTED BY : ADESH G. LOKHANDE

ROLL NO. : MC250005CA

INTRODUCTION

Input and Output devices work at different speeds. A slow device can reduce overall system performance.

To solve this, Spooling, Buffering, and Caching techniques are used to improve I/O performance.

WHAT IS SPOOLING?

- Spooling stands for **Simultaneous Peripheral Operations Online**.
- It helps manage slow devices by storing work in a queue on the disk.
- The device performs tasks at its own speed while the CPU continues other work.

EXAMPLE OF SPOOLING

- Printers are slower than computers.
- Print tasks are first stored in a queue on the disk.
- The printer prints them one by one without stopping the computer from working.

Work is queued to avoid waiting for slow devices.

WHAT IS BUFFERING?

- Buffering temporarily stores data in a buffer in the RAM.
- It helps balance the speed difference between fast and slow devices.
- It keeps data flow smooth and prevents delays.

PAGES

EXAMPLE OF BUFFERING

- When you play a YouTube video, some part is loaded first before playing.
- This stored data is called a buffer.
- It prevents pauses when data is being fetched.

Data is held temporarily to avoid interruptions.

WHAT IS CACHING

- **Caching stores frequently used data in cache memory, which is very close to the CPU.**
- **This reduces the need to fetch data repeatedly from slower memory.**
- **It increases the system performance.**

EXAMPLE OF CACHING

- If you open a recently used file, it opens faster because it is stored in cache.
- The CPU can quickly access cached data.

Frequently accessed data is stored in fast memory for quick access.

CONCLUSION

- 1** All three techniques improve I/O performance.
- 2** Spooling uses queue storage, Buffering holds data temporarily, and Caching stores frequently used data in fast memory.
- 3** These methods make the system faster and more efficient.

THANK YOU

**SO MUCH MA'AM TO GIVING ME
THIS OPPORTUNITY**
