

Practical 4

Aim: Perform string operations (concatenation, slicing).

Source-Code:

```
<?php
$str1 = "Hello";
$str2 = "World";

$result = $str1 . " " . $str2;
echo "Concatenated String: " . $result;
echo "<br><br>";

$part = substr($result, 0, 5);
echo "Sliced String: " . $part;
?>
```

Output:

Concatenated String: Hello World

Sliced String: Hello
