

Practical No. 1

Aim : Create a basic PHP script that prints "Hello World".

Source-Code :

```
<?php  
echo "Hello World ...!!!!";  
?>
```

Output :

Hello World...!

Practical No. 2

Aim: Write PHP scripts demonstrating the use of variables, data types, and constants.

Source-Code :

```
<?php
$a=68;
echo "Integer a=", $a."<br>";
$b="Heyy There!!!";
echo "String b=", $b."<br>";
$c=true;
echo "Boolean c=", $c."<br>";
$d=1.99;
echo "Float d=", $d."<br>";
$array= array("a1","a2","a3"); var_dump($array);
define("Name", "Piyush"); echo "<br>".Name;
?>
```

Output:
