

PRACTICAL NO 2

Aim: Implement a Java program that defines a class with fields and methods, creates objects, and demonstrates accessing methods using objects.

Source Code:

```
class student {  
    int rollNo;  
    String name;  
    void setDetails(int r, String n){  
        rollNo = r;  
        name = n;  
    }  
    void display(){  
        System.out.println("Roll No: " + rollNo);  
        System.out.println("Name: " + name);  
    }  
}  
  
public class studentDemo {  
    public static void main(String[] args) {  
        student s1 = new student();  
        s1.setDetails(68,"Rishabh");  
        s1.display();  
        System.out.println();  
        student s2 = new student();  
        s2.setDetails(56,"Pranit");  
        s2.display();  
    }  
}
```

Output:

```
Roll No: 68  
Name: Rishabh
```

```
Roll No: 56  
Name: Pranit
```
