

- (1) Write RSA Algorithm.
- (2) Explain block cipher. Their all types
- (3) Explain substitution and transposition technique with diagram.
- (4) Write a unlock cipher and their principal.
- (5) What is cyber threat? And explain
 - (i) Cyber crime
 - (ii) Cyber terrorism
 - (iii) Cyber warfare
- (6) Which are the internet governance challenges explain.
- (7) Explain cyber threat in detail.
- (8) What is national cyber security policy?
- (9) Explain the principal of security in detail.
- (10) Explain the need of comprehensive cyber security policy. why we need cyber security policy in today's world.
- (11) Write a hash algorithm (Sha 5.2).
- (12) Explain the poor cyber security ~~awareness~~ awareness.
- (13) Differentiate between semantic / symmetric and asymmetric key.

- (11) Explain block ciphers? their all types
- (14) Differentiate between cryptography and cybersecurity.
- (15) What types of security services? Explain all the types security management.
- (16) Explain credit-card fraud in mobile and wireless computing with net diagram.
- (17) What is mobile device / wireless device? Explain the challenges of mobile / wireless device.
- (18) Explain the ^{national} cyber security policy.
- (19) Explain different types of attacks in detail.
- (20) What are the three principals of data privacy?
- (21) Explain various organization security policy.
- (22) Differentiate between WPA and WPA2.
- (23) What are cyber attacks and cyber threats?
- (24) How to detect the credit card attack?

PAGE _____

25) What is copyright? explain with an example.

26) Explain about the physical infrastructure required in data transfer.

27) Write about cyber security financial fraud.

28) Write about the firewall and wifi security.

29) Define (i) Fraud

(ii) Scam

(iii) Identity

(iv) Theft

(v) Brand theft

(vi) Intellectual property

30) Explain terms criminal attacks, publicity attacks, legal attacks.
