

Practical 3

Aim: Create custom PHP functions to calculate factorials, primes.

Source-Code:

```
<?php
function factorial($n)
{
    $fact = 1;
    for ($i = 1; $i <= $n; $i++) {
        $fact = $fact * $i;
    }
    return $fact;
}

function isPrime($n)
{
    if ($n < 2) {
        return false;
    }

    for ($i = 2; $i < $n; $i++) {
        if ($n % $i == 0) {
            return false;
        }
    }
    return true;
}

$num1 = 5;
echo "Factorial Calculation<br>";
echo "Factorial of $num1 is " . factorial($num1);
echo "<br><br>";

$num2 = 7;
echo "Prime Number Check<br>";
if (isPrime($num2)) {
    echo "$num2 is Prime";
} else {
    echo "$num2 is Not Prime";
}
?>
```

Output:

Factorial Calculation
Factorial of 5 is 120

Prime Number Check
7 is Prime
