

Practical 7

Aim: Create a file upload system in PHP where users can upload images and files.

Source-Code:

```
<?php
$conn = new mysqli("localhost", "root", "", "rishabh");
if ($conn->connect_error) {
    die("Connection Failed: " . $conn->connect_error);
}
$message = "";
if(isset($_GET['delete']))
{
    $id = $_GET['delete'];
    $result = $conn->query("SELECT filepath FROM uploads WHERE id=$id");
    $row = $result->fetch_assoc();
    if(file_exists($row['filepath']))
    {
        unlink($row['filepath']);
    }
    $conn->query("DELETE FROM uploads WHERE id=$id");
    $message = "File deleted successfully!";
}
if(isset($_POST['upload']))
{
    $targetDir = "uploads/";
    if(!file_exists($targetDir))
    {
        mkdir($targetDir, 0777, true);
    }
    $fileName = basename($_FILES["file"]["name"]);
    $targetFile = $targetDir . $fileName;
    if(move_uploaded_file($_FILES["file"]["tmp_name"], $targetFile))
    {
        $sql = "INSERT INTO uploads(filename, filepath)
        VALUES('$fileName', '$targetFile')";

        if($conn->query($sql))
        {
            $message = "File uploaded successfully!";
        }
        else
        {
            $message = "Database Error!";
        }
    }
    else
    {
        $message = "File upload failed!";
    }
}
```

```
?>
<!DOCTYPE html>
<html>
<head>
  <title>File Upload System</title>
  <style>
    body{
      font-family: Arial, sans-serif;
      margin: 50px;
    }
    .container{
      width: 400px;
      padding: 20px;
      border: 1px solid #ccc;
    }
    input[type=file]{
      margin: 10px 0;
    }
    input[type=submit]{
      padding: 8px 15px;
    }
